

Operators looking to reach increased heights turn to the SpaceVac Pro 38mm system for heavy duty performance.

In developing our Pro poles, SpaceVac's engineering team faced a unique challenge - how to increase the reach of the SpaceVac system without compromising operation.

By employing advancements in Carbon engineering technology, the team developed a new carbon fibre blend; utilising increased amounts of carbon to produce a cleaning pole that not only reduced the individual pole weight (crucial when adding additional poles to reach increased heights) but also improved the rigidity of the complete system to ensure improved stability - even at full height.
